

Application

```
classDiagram
    class Application
    class it_unisa_biblioteca_gruppo21_App["it.unisa.biblioteca.gruppo21.App"] {
        +start()
        +main()
    }
    it_unisa_biblioteca_gruppo21_App --|> Application
```

The diagram illustrates a class hierarchy. At the top is an abstract class named 'Application', represented by a rectangle with three horizontal compartments. The top compartment contains the class name, while the other two are empty. Below it is a concrete class named 'it.unisa.biblioteca.gruppo21.App', represented by a shaded rectangle with three horizontal compartments. The top compartment contains the class name. The middle compartment is empty. The bottom compartment contains two public methods: '+ start()' and '+ main()'. A blue arrow with an open triangle head points from the concrete class to the abstract class, indicating inheritance.

it.unisa.biblioteca.gruppo21.App

+ start()

+ main()
